

## Spelling Bee List

Dental professionals use these and many other such terms daily. Correct spelling is a **must** in an office committed to TQM (Total Quality Management). Consider having a spelling bee or other games to learn the meaning, pronunciation, and correct spelling of these and other words you choose to add. Note: The three columns are not related; i.e., acetaminophen is not a drug to treat amelogenesis imperfecta, etc.

| <b>Drug</b>       | <b>Physical Condition</b>  | <b>General Terminology</b> |
|-------------------|----------------------------|----------------------------|
| acetaminophen     | Xylocaine                  | allergies                  |
| ampicillin        | amelogenesis imperfecta    | abrasion                   |
| amoxicillin       | aphthous ulcer             | abscess                    |
| amphetamine       | asthma                     | alveolar                   |
| Benzocaine        | autism                     | alveolus                   |
| caffeine          | stomatitis                 | analgesia                  |
| calcium hydroxide | cleft palate               | antibiotic                 |
| Carbocaine        | dentinogenesis imperfecta  | anesthesia                 |
| Ceclor            | diabetes                   | amalgam                    |
| chloral hydrate   | diabetic                   | auxiliary                  |
| codeine           | diarrhea                   | calcium                    |
| diazepam          | Downs Syndrome             | cervical                   |
| Dilantin          | dystrophic calcification   | chemotherapy               |
| Durelon           | ectodermal dysplasia       | composite                  |
| epinephrine       | epileptic                  | contagious                 |
| erythromycin      | gingivitis                 | enamel                     |
| ibuprofen         | hepatitis                  | enameloplasty              |
| insulin           | herpes                     | fluoride                   |
| lidocaine         | herpetic gingivostomatitis | hemorrhage                 |
| mepivacaine       | hemophilia                 | hygiene                    |
| midazolam         | hemophiliac                | hygienist                  |
| Motrin            | hydrocephalic shunt        | hypercalcification         |
| Novocaine         | hyperplasia                | hypocalcification          |
| Nystatin          | leukemia                   | incisor                    |
| oxycodone         | muscular dystrophy         | labial frenum              |
| penicillin        | osteogenesis imperfecta    | mandibular                 |
| phenobarbital     | scoliosis                  | maxillary                  |
| Percocet          | seizures                   | mucosa                     |
| peroxide          | sickle cell anemia         | occlusion                  |
| Ritalin           | spina bifida               | palliative                 |
| Robital           | temporo mandibular         | percussion                 |
| Septra            | tetanus                    | pulpectomy                 |
| sodium chloride   | Tetralogy of Fallot        | pulpotomy                  |
| sodium fluoride   | thyroid                    | radiolucency               |
| sulfa             | VonWillebrand's Disease    | vaccines                   |
| tetanus vaccine   |                            | sealant                    |
| tetracycline      |                            | traumatic                  |
| Tylenol           |                            |                            |
| Valium            |                            |                            |
| Versed            |                            |                            |
